Projects These projects can be found in https://github.com/irigpratit

Snake Game: Semester Project for the first year, done using OpenGL and C Programming with some concept of File handling. My role in this was to look after the coding part.

Foodline: A online food ordering and delivery system, built using HTML, CSS, PHP and MySQL. My role in this project was to look the front end development.

Teachers Assistant: A Android application made for ease of university teachers to assign task to the specific groups, take attendances and provide personal assignments and grades. In this my role to look for the database but this was not so heavy project.

E-Commerce Website: A e-commerce website for a clothing store, this was the first ever clients work done during my studies. This was done using La-ravel. I was developin g the front end of this e commerce site.

Old Is Gold: A online book buying and selling portal for our own Startup. this was done during the classes of MIT Global Startup Labs in Nepal. I was looking after the front end development and user testing of this project.

Besides this there are some database, Artificial Intelligence and Machine Learning projects done as a part of mini project.
